ABSTRACT

Andini Dirma Septiyani¹, Sondang Siahaan², Erris Siregar³

Based on the Decree of the Minister of Health of the Republic of Indonesia Number 1429/MENKES/SK/XII/2006 concerning Guidelines for Environmental Health Requirements of School Canteens, the type of research used in this study is descriptive. The observed aspects include the location of the canteen building, the availability of dishwashing facilities, handwashing stations, waste management, storage facilities for food ingredients and equipment, and the provision of clean water. Based on observations of five canteens, the physical condition of the canteen buildings was generally good. In terms of sanitation facilities, none of the canteens had handwashing stations. Only three canteens had dishwashing facilities, while the remaining two did not. Only two canteens had adequate food storage facilities, while the other three were inadequate. Waste management did not consistently meet the required standards, with four canteens rated as fairly good and one rated very poorly. In addition, one canteen did not have a clean water supply for food processing, as it only served beverages.
