ABSTRACT

Hygiene Sanitation in Elementary School Canteens in Paal V Village, Jambi City in 2025 Hygiene and sanitation in the canteen aspects studied include cleanliness of the place, storage of food ingredients, and serving methods. WHO states that more than 200 infectious diseases can be transmitted through unhygienic food, so the implementation of hygiene and sanitation standards in school canteens is very important to prevent disease. This study aims to describe the hygiene and sanitation in elementary school canteens in the working area of the Paal V Community Health Center, Jambi City.

It was carried out in May-June 2025. The study population was food handlers and canteens in elementary schools in the working area of the community health center, with a sample of 8 schools and 37 food handlers. Data were collected through forms and analyzed univariately to provide an overview of the observation results of the variables studied.

he results showed that 1 elementary school, or 12.5%, met the location requirements, while 7 elementary schools, or 87.5%, did not. Regarding sanitation facilities, 2 elementary schools, or 25%, met the requirements, and 6 elementary schools, or 75%, did not. Regarding personal hygiene, 12 elementary schools, or 32.4%, met the requirements, and 25 elementary schools, or 67.6%, did not.

The conclusion of the study regarding the Overview of Hygiene and Sanitation in Elementary School Canteens in the Paal V Village, Jambi City, in 2025, did not meet the requirements.
